User rights profile:

○ Open wiki
○ Account
creation
required
◉ Authorized
editors only
○ Private wiki

💡 Wikis work
best when
you let as
many
people edit
them as
possible.
In
MediaWiki,
it is easy
to review
the recent
changes,
and to
revert any
damage
that is
done by

- Language
- Existing wiki
- Welcome to
  MediaWiki!
- Connect to database
- Upgrade existing
  installation
- Database settings
- Name
- **Options**
- Install
- Complete!

- Restart installation

naive or malicious users.

However, many have found MediaWiki to be useful in a wide variety of roles, and sometimes it is not easy to convince everyone of the benefits of the wiki way. So you have the choice.

The **Open wiki** model allows anyone to edit, without even logging in. A wiki with **Account creation required** provides extra accountability, but may deter casual contributors.

The **Authorize**

d editors only scenario allows approved users to edit, but the public can view the pages, including history. A **Private wiki** only allows approved users to view pages, with the same group allowed to edit.

More complex user rights configurations are available after installation, see the relevant manual entry.

help

Images and file uploads

help

☐ Enable file uploads

help

> Instant Commons is a feature
> that allows wikis to use images,
> sounds and other media found
> on the Wikimedia Commons
> site. In order to do this,
> MediaWiki requires access to
> the Internet.
>
> For more information on this
> feature, including instructions on
> how to set it up for wikis other
> than the Wikimedia Commons,
> consult the manual.

☑ Enable Instant Commons

Personalization

For each of these fields, you will need to upload an image of
the appropriate size, and enter the URL in the boxes below.
You can use $wgStylePath or $wgScriptPath if your logo is
relative to those paths. You can leave any of these boxes
blank.

Logo (icon):

help

    $wgResourceBasePath/resources/assets/c

Wordmark (optional):

help

Tagline (optional):

help

> The tagline of your site. Use only if you have defined a
> wordmark above. If not defined, this will generally fall

back to text. The combined height of the tagline and wordmark as a general rule should not exceed 50px.

Sidebar logo (optional):

help

$wgResourceBasePath/resources/assets/c

Set $wgLogos with the URL path to your own logo image

Main page

Set $wgLogos with the URL path to your own logo image   islamincontext

---Advanced configuration---

Settings for object caching:

◉ No caching (no functionality is removed, but speed may be impacted on larger wiki sites)

◯ Use Memcached (requires additional setup and configuration)
